1.0 INTRODUCTION

On January 22, 2008, WRS was issued emergency Task Order 11 in the amount of \$50,000.00 to respond to a neighborhood on Pine Street in Atlanta, Georgia. The residential area was the location of lead impacted soils in and around a storm drain and in the yard of some residences and a church. WRS Project Manager mobilized to the site to meet with the OSC survey the site and to discuss potential cleanup operations. The site consisted of soil that had tested for lead exceeding 10,000 mg/kg. The soils were not isolated from the public and contact with the contaminated soils was a potential hazard. The WRS Project Manager met with the OSC and surveyed the site. It was decided to initially mobilize a fence contractor to erect a fence to isolate the area while the planning activities, access agreements, and design elements took place.

2.0 SUMMARY OF ACTIVITIES

WRS met the OSC at the site on January 23, 2008 to conduct a survey of the site due to the potential for the contact with the contamination by the public. Upon arrival WRS and the OSC surveyed the site to develop a plan of action. WRS contacted sub-contractor Cherokee Fence to erect a fence to limit access to the contaminated area. The fence was erected on January 24.

Over the next few months access agreements were being worked out by the OSC. As well an engineer with the City of Atlanta was contacted regarding the impacted storm drain. The engineer advised the OSC that the storm drain was not maintained by the city and any removal would not be in the cities abilities. The OSC requested a capacity test on the storm drain to determine whether it was the correct size for the location. The test came back that the drain was inadequate for the location. WRS was tasked with designing a new, larger diameter storm drain system for the location. WRS subcontracted Q-B Engineering, a local engineering company, to draw the plans for the new system. Q-B was also tasked with surveying the site.

In June 2008, WRS' Project Manager attended a preconstruction meeting at the site to go over the final details of the project.

On July 17, 2008 the WRS crew mobilized to begin site work. The initial work consisted of setting up site facilities, including, an access drive, a lined soil stockpile/truck loading area and material storage area. One of the property owners denied access to their property; this necessitated a change in the plan for the drain, including a slight re-routing of the pipe and 2 additional junction boxes. They later allowed access for cleanup but the line was still re-routed. The various properties were prepared for excavation by removing children's play sets for later reinstallation, installing silt fence, removal of fences, and removal of vegetation and trees that cannot be saved. A subcontractor was used to remove the designated trees. An Arborist was brought in to detail and oversee the methods to save trees that could be saved. A 6 inch pump was rented to pump storm water around the project.

The soils necessary for the new pipe structure were excavated. The soil with elevated levels of lead was transported to the stockpile area for either transport or treatment and transport dependant upon the levels of lead. When the drain inlet on Pine Street was uncovered workers found a concrete monolith behind it that had to be removed, this delayed progress by half a day. The new pipe and structures were installed and connected. The grade was shot with a laser level to ensure that the fall was correct. A yard drain was added to the church property to ensure proper drainage. As the installation progress onto the church property the areas that were installed had to be backfilled as work progressed. Only a limited area could be left open.

Other impacted soils were then excavated and taken to the stockpile area for treatment and load out. Soils were excavated and placed in the stockpile area based on level of contamination. Soils with high levels of contamination were treated with Enviroblend to render them non-hazardous. Confirmation samples were taken and analyzed to confirm that the treatment had been effective. As the soils were loaded out attempts were made to use the same trucks to bring in the pretested backfill.

Once all impacted soils were removed the areas were re-graded to promote natural drainage. In some areas this involved the installation of retaining walls. Retaining walls were designed so as to match the various properties. All areas were replanted and sod was installed. Fences were either reinstalled or replaced as appropriate. WRS water the lawns to promote growth. WRS removed all contractor installed facilities and demobed the site.

3.0 TRANSPORTATION AND DISPOSAL

Non-Hazardous (treated) Contaminated Soil – 46 loads totaling 748.77 tons to Waste Management Pine Bluff Landfill, a Subtitle D facility in Ball Ground, GA. See attached CERCLA Off-site disposal report for additional details.

The CERCLA report and manifests are submitted on the CD with this final report.

3.0 HEALTH AND SAFETY

WRS personnel adhered strictly to the corporate Health and Safety Plan and all WRS SOP's as prepared by the WRS Corporate Health and Safety Officer. Dust control measures were implemented to control dust emissions. A site safety person/competent person was on site to oversee and document all aspects of the excavation safety. Site activities were completed with no OSHA Recordable or Lost Workday incidents. A Site Specific Health & Safety Plan was prepared for the site and implemented.

5.0 PROBLEMS AND RESOLUTION

WRS encountered no problems while performing the requested operations at the Pine Street Lead Fill Site.

6.0 FINANCIAL SUMMARY

As stated in Section 1 of the report, Task Order #11 was issued with a ceiling of \$50,000.00 for the specified scope of work. On June 4, 2008 an amendment to the Task Order increased the ceiling to \$200,000.00.

The projected Final Cost for the Task Order is \$181,103.31, recognizing a balance of funding for de-obligation of \$18,896.69. A detailed cost breakdown for this Task Order is provided in Appendix A. The current summary of the project financials through October 30, 2008 is as follows:

TO #	Obligated Ceiling	Deobligated Funds	Cumulative Personnel	Cumulative Equipment	Cumulative OFCs	Pending Total	Cumulative Total	% of Ceiling
0078	\$200,000.00	\$18,896.69	\$53,840.05	\$3532.10	\$123,731.16	\$0.00	\$181,103.31	90.61%

APPENDIX B
WASTE MANIFESTS/CERCLA OFF-SITE DISPOSAL REPORTS
AND CERTIFICATES OF DISPOSAL/DESTRUCTION

The CERCLA report and manifests are on the CD with this final report.

CERCLA OFF-SITE DISPOSAL REPORT
Treated Lead Impacted Soil & Debris

Information required for CERCLA off-site waste management activities:

1. Superfund Site name/State/CERCLIS SSID No.

Pine Street Lead Fill Site, Atlanta, GA, GAN000410179

2. Type of action (check two)

<input checked="" type="checkbox"/>	Removal	<input type="checkbox"/>	Remedial
<input checked="" type="checkbox"/>	Fund financed	<input type="checkbox"/>	PRP financed

3. Type (check one) and form (check one) of waste; if more than one type, attach separate sheets for this and remaining questions for each type:

Type		Form	
Solvents	<input type="checkbox"/>	Wastewater	<input type="checkbox"/>
Cyanides	<input type="checkbox"/>	Liquid Waste	<input type="checkbox"/>
Heavy Metals	<input type="checkbox"/>	Organic Sludge	<input type="checkbox"/>
Acids	<input type="checkbox"/>	Organic Sludge	<input type="checkbox"/>
PCB's	<input type="checkbox"/>	Contaminated Solid	<input type="checkbox"/>
Halogenated	<input type="checkbox"/>	Solid or Solidified	<input checked="" type="checkbox"/>
Other RCRA Listed	<input type="checkbox"/>		<input type="checkbox"/>
Non-RCRA Household Waste	<input type="checkbox"/>		<input type="checkbox"/>
Non Hazardous	<input checked="" type="checkbox"/>		<input type="checkbox"/>
Lab Packs	<input type="checkbox"/>		<input type="checkbox"/>

4. Quantity of waste:

QTY	UNIT
748.77	Tons

5. Range, average, and/or representative concentrations of the contaminants of concern:

Treated soil and debris 100%
 <.75 mg/l Lead by TCLP

6. Pre-treatment of waste before transportation:

<input type="checkbox"/>	Precipitation	<input type="checkbox"/>	Neutralization
<input type="checkbox"/>	Solidification	<input type="checkbox"/>	Fixation
<input checked="" type="checkbox"/>	Stabilization	<input type="checkbox"/>	None

7 Receiving RCRA facility name/location/ID number:

Waste Management Pine Bluff landfill
13809 East Cherokee drive
Ball Ground, GA 30107
770-479-2936

8 Receiving Region: 4

9 Receiving region off-site contact (RROC):

Paula Whiting

10 Date started shipment: 7/30/2008

Date disposal is completed: 8/12/2008

Manifest #'s Non-Hazardous Manifests 10805367 to 10805412

11 Pre-treatment of waste at site before final treatment or disposal:

	Precipitation		Neutralization
	Incineration		Fixation
	Stabilization	X	None

12 Final method of treatment or disposal/unit receiving:

	Precipitation		Neutralization
	Incineration		Landfill
	Chemical treatment		Injection
	Fuels Blending	X	Other

13 If waste was land-filled: -what disposal cell number or location?

Special Waste Cell

-type of liner in cell?(e.g. PVC, clay, hypalon)

Clay

14. Cost of activities: Note: There was a 15 ton min load charge

\$32.75	Treatment/disposal cost per unit/gal
\$26,179.79	Total cost treatment/disposal only
\$1,310.35	Environmental Fees
Included in	Total cost for transportation
\$26,179.79	Total Cost Disposal & Transportation
